

What to Expect When You Breed to Sir Sinclair, Keur

Sir Sinclair is an exceptional sire. He stamps his offspring in type and movement. In general, his offspring are friendly, gentle and easy to train and work with. Sir's sons and daughters are easy to start and fun to ride. He does not throw a lot of white. His offspring are bay, unless their dam is gray or pinto. In those cases, Sir has produced gray and pinto foals. He has never produced chestnut.

Offspring Characteristics

- Rectangular type
- Beautiful, refined heads, very expressive
- Fairly refined and long lined with long legs
- Usually bay with little to no markings, except for occasional star, very little white on legs
- Excellent head/neck connection, with a long poll and nice throatlatch
- Long, vertically set, well-muscled neck
- Good topline, with a good connection at the withers
- Nice, long sloping shoulder
- Strong muscling in the back
- Croup has good length, shape and muscling
- Heels of feet tend to be moderately high, which is good for soundness
- Nice, lean legs
- Lighter, modern type bone
- Good height
- Very long, elastic walk
- Powerful, elastic trot
- Canter with lots of reach and power

Ideal Pairing

Sir is ideal for large-boned mares who need a more modern type of stallion. With fine-boned mares, the result is more bone, but never heavy. Sir is a good stallion to breed to hot mares since the offspring tend to have his easygoing temperament.

He is not suited for mares with:

- Flat withers, weak back line
- Weak loin connection
- Croup that is too sloping or high at the withers
- Back at the knee sickle hocks
- Long pasterns
- Narrow feet
- Toes out in the walk
